EAS 4.000

Energy Analysis System for operational datalogging + alarms

EAS Features

- Users of dibalog's Energy Optimization System can **quickly and easily** expand that to include **datalogging and cost controlling**
- **Modular design** which means the system grows as you grow. Expandability: you can **record from up to 10,000 points**
- In addition to datalogging the system is also designed for **preventative maintenance**
- EAS is also a comprehensive **alarm system with optional alarm forwarding by phone or email** and voice-operated acknowledging function
- Users of dibalog's Energy Optimization System will find that the interfaces are already in place making this a **very simple feature to add**
- System installation **without production standstills**
- Both systems EOS and EAS use **only one central unit as shared system platform**. That means you can either use EOS or EAS standalone or both systems together with all combined functions on just one central unit
- **Proven technology** with many systems in place in the heat treating industry
